Delegating on Flare

FTSO: Flare Time Series Oracle

Flare Time Series Oracle is a **decentralized** oracle system on the Flare network.

It provides historical and real time price data for crypto assets. Data comes from multiple independent providers. The system aggregates and verifies submissions to reduce manipulation. Smart contracts use this data for DeFi, lending, staking, and analytics. You get transparent, on chain price history without relying on a single source.

VALIDATING

- DATA (Web 2, Web 3, Prices) **is going to FLARE**
- TRANSACTIONS

Making sure these 100,000 FLR become votes

Who You Choose as a Delegator is IMPORTANT
